PRESS RELEASE

AiRTS® launches GenAI Twin®, a revolutionary and patented technology that harnesses AI and GenAI in a way not seen before.

3 April 2025, Singapore – AiRTS®, an AI-first next-generation technology firm, launches GenAI Twin®.

GenAI Twin®, a revolutionary technology that harnesses AI and GenAI in a way not seen before. This patented technology is a virtual replica of organizations' employees, executing their daily tasks while strictly adhering to the organizations' policies, procedures, and internal controls.

Many organizations maintain a large workforce, even with access to advanced enterprise solutions, robotic process automation (RPA) solutions, and GenAI chatbots, because the tasks at hand still demand the cognitive abilities and decisions of their employees. GenAI Twin® performs these tasks like a virtual replica of the employees.

GenAI Twin® will turbocharge productivity and reduce costs like never before. Organizations can now automate routine and manual tasks, freeing up the employees to review the output from GenAI Twin®, manage tasks beyond its capabilities, or focus on more value-added activities. Employees' morale will likely improve as they are relieved from monotonous tasks and can focus on more challenging responsibilities. Additionally, GenAI Twin® eliminates human errors, ensures compliance, and streamlines operations.

About AiRTS®

AiRTS® is an AI-first next-generation technology firm. AiRTS® helps you develop AI-powered enterprise solutions that are artistically and strategically designed. A solution tailored to (a) achieve your strategic and operational objectives, (b) turbocharge your productivity and profitability, (c) significantly reduce IT security vulnerabilities and overall IT costs and get the most accurate results and predictions that your business needs.
