

As urban healthcare systems across Southeast Asia grapple with staffing shortages and rising demand, **Locum Apps** is emerging as a regional solution built for speed, safety, and scale. Developed by Malaysian digital health company **WeAssist**, the platform enables hospitals and clinics to find pre-vetted doctors and nurses on-demand — in under 30 seconds.

Already trusted by leading private healthcare facilities across Malaysia, Locum Apps is now actively exploring new markets, with **Singapore** firmly in its sights. The platform is particularly relevant to Singapore's high-performance, urban-centred healthcare system, where flexibility, credentialing rigour, and workforce efficiency are paramount.

"We designed Locum Apps to solve a local problem, but what we've created now speaks to cities across the region," said **Tiffany Khoo**, CEO of WeAssist. "We're excited to bring our proven model into new healthcare ecosystems that value quality, agility, and innovation."

### **What Sets Locum Apps Apart**

- **Instant Access:** Hospitals view and book clinicians with verified credentials in real time.
- **Built for Safety:** Every doctor and nurse is screened and compliance-ready.
- **Flexible Workforce:** Supports part-time work and return-to-practice professionals.
- **Credentialing Engine:** Adapts to each country's regulatory requirements.
- **Financial Empowerment:** Supports savings and income tracking for gig healthcare workers.

Locum Apps has also secured partnerships with Malaysia's **Employees Provident Fund (EPF)** and **PayNet**, enabling healthcare gig workers to contribute to retirement savings — a blueprint it hopes to replicate across other ASEAN markets.

With increasing global recognition, including a recent win at the **World Summit Awards 2025** under the UN-backed Smart Settlements & Urbanisation category, WeAssist is now setting the stage for cross-border growth.
